

Mobile sawmill ECOPRO UL®

Easy to implement on the sites where the wood is

Our constant Technological Innovation, equipped with the use of the best materials, has made the reputation of ECO PRO-2 machines in fixed or semi-mobile installation. These mobile sawmills have demonstrated their qualities and performances in several occasions. Today we have the advantage of offering you a new machine quite light equipped with 9 meter rails for sawing logs 7 m long with the possibility of extension.

Discover:

ECO PRO UL®, the ultra light mobile sawmill with tilting blade. The ECO PRO UL® is the ultra light version of the ECO PRO2® mobile sawmill with a total weight of 400 kg can saw blocks of wood up to 25 x 25 cm (optional 30 x 30 cm) with a daily capacity up to 15 m³ of sawn timber and can be mounted on a trailer to be deployed in less than an hour and move from ball to ball.

This saw is available with a 31 HP combustion engine for the mobile version (light rails) or a 22 KW motor for the fixed version (robust rails).

The ECO PRO UL® allows sawing/edging at the same time and can saw logs without limitation in length by simply extending the translation rails.

The adjustment of the cutting thickness is ensured using a single crank coupled to a transmission system which allows the up/down stroke of the blade to be adjusted with precision.

This machine is used to delete skidding operations.

Mobile sawmill ECOPRO UL®

For precise, quality and customized sawing

All ECOPRO ® machines are manufactured with high quality materials in our factories in Belgium (without parts imported from China, Taiwan, or Poland to be assembled).

ECOPRO ® blade sharpening is easy because it does not require blade removal or additional investment in precision grinding and cutting machines, as is the case of sharpening the blades of mobile tape mills, which is subjective and whose blades break with hard woods.

ECOPRO ® is the undisputed leader in portable sawmills with circular blades.

Sawing logs without length limitation thanks to the "extendable" rails.

ECOPRO UL® can saw any exotic wood to the desired size (beam, planks, rafters ...).

Organization of the site where the logs are; The ECOPRO UL® is easily transportable without dismantling by four people or 4x4, trailer ... etc
